

Investment in the 2021 holiday season: Liebherr 53 K fast-erecting crane on Mallorca

Biberach an der Riss (Germany), 30 June 2020 - A Liebherr 53 K fast-erecting crane uses the almost tourist-free holiday season in Mallorca. There he helps at brilliant sunshine, light blue sky and crystal clear sea in the construction of a family house with pool for a German family.

The small space requirement was particularly decisive for the choice of the Liebherr fast-erecting crane: the turning radius is only two and a half meters with appropriate ballasting. This turned out beneficial for the construction of the single-family house in the densely built-up area of the municipality of Santanyí, in the Cala Llombards region.

In addition to the efficiency of the Liebherr fast-erecting crane, crane operator Grúas Cerezo particularly appreciates the ease of installation and ease of use.
