More LHM – More Business

- Port of Karmsund orders another LHM 550 for the Haugesund Cargo Terminal in Husøy, Norway
- Purchase of the first LHM 550 two years ago increased business at Haugesund Cargo Terminal
- Two LHM 550s with a tandem lifting capacity of up to 308 tonnes make the Port of Karmsund Norway's top address for heavy lifting

Karmsund Havn IKS has just signed a contract for a second Liebherr LHM 550. Only three years ago, Karmsund Havn ordered their first Liebherr mobile harbour crane, type LHM 550. The machine delivered two years ago brought additional business to the port, so another LHM 550 is now being purchased to meet the increased demand. The second LHM 550 will enable the Haugesund Cargo Terminal to offer tandem lifts of up to 308 tonnes for the growing offshore wind industry.

Business is booming at Haugesund Cargo Terminal. This positive development for the port of Karmsund is closely linked to the purchase of a Liebherr LHM 550 mobile harbour crane in 2019. The newly acquired crane has allowed container and heavy lift handling to flourish. “We have been very satisfied with our LHM 550, and with our collaboration with Liebherr. We have had far higher activity on the first crane than expected. Investing in a second LHM 550 after only 2 years of operation with the first one, says a lot about the development at the terminal, and also about the expectations for further growth,” reports Tore Gautesen, Karmsund Port Director.

Double capacity for the offshore wind industry

The port of Karmsund is one of the largest ports in the region and now wants to become the top port address in Norway. For this reason, the port recently decided to order another LHM 550 mobile harbour crane from Liebherr Maritime in Rostock, Germany. Above all, another crane is needed for the ever-growing project cargo business and for the booming offshore wind industry. A big advantage is the possibility to use both cranes for tandem lifts and thus even double the total crane capacity. “We are deeply involved in the project market

and have the best equipment fleet in Norway for heavy lifting. The investment in crane number two will also give us great opportunities to position the terminal when handling modules for offshore wind turbines, as the crane offers possibilities for tandem lifts with crane number one with a total capacity of 308 tonnes,” Tore Gautesen continues.

Electric drive for zero emissions

The harbour crane will be operated on electricity, which corresponds with Karmsund Port Authority’s vision that the port should, as far as possible, be operated under the principles “Lean – Clean – Green”. The crane will be able to operate the entire dock area at Husøy, and is equipped for handling containers, bulk cargo and project loads. *“The new mobile harbour crane will, like crane number one, be powered by electricity. This is in line with the Port of Karmsund’s goal of a green port,”* adds Tore Gautesen. The new machine has a maximum lifting capacity of up to 154 tonnes and a maximum outreach of 54 metres. It will be shipped fully assembled by the heavy load carrier Meri from Rostock, Germany to Karmsund, Norway in March.

About Liebherr-MCCtec Rostock GmbH

Liebherr-MCCtec Rostock GmbH is one of the leading European manufacturers of maritime material handling solutions. The product range comprises ship, mobile harbour, and offshore cranes. Reachstackers and components for container cranes are also included in the product portfolio.

About the Liebherr Group

The Liebherr Group is a family-run technology company with a highly diversified product portfolio. The company is not only one of the largest construction equipment manufacturers in the world, but also provides high-quality and user-oriented products and services in a wide range of other areas. The Liebherr Group includes over 140 companies across all continents, employs more than 48,000 staff and in 2019 achieved combined revenues of over 11.7 billion euros. Since its foundation in 1949 in Kirchdorf an der Iller in Southern Germany, Liebherr has been pursuing the goal of achieving continuous technological innovation, and bringing industry-leading solutions to its customers.
