

Press release

Liebherr Connect – connecting man, machine and environment

- Liebherr Connect provides access to machine data and digital solutions and services
- Customers and partners are equipped for every type of fleet or asset management system
- Liebherr Connect: the basis for machine networking and another milestone in digitalisation

With Liebherr Connect, the Group is taking a further step in the digital networking of machines. At the same time, the state-of-the-art connectivity solution creates a link between man, machine and the environment. Efficient data exchange represents major added value for customers and partners. Liebherr Connect is the key to digitalisation – today and in the future.

Nussbaumen (Switzerland), 28th October 2024 – The user and their individual needs are Liebherr's top priority, including when it comes to digitalisation. The goal is to create added value for customers and partners – for example, through time and cost savings or by making machines and systems safer and easier to operate. The crucial step for these possibilities is called Liebherr Connect.

Significant added value thanks to intelligent machine networking.

At Liebherr, specialists across all product segments actively contribute to shaping the digital transformation in numerous industries. This includes, for example, new possibilities in machine and system networking. With Liebherr Connect, the Group is creating a connection between man, machine and the digital environment. Through intelligent machine networking, Liebherr Connect enables access to digital solutions and services, as well as extensive machine and process data. When using fleet and asset management systems, Liebherr Connect forms an essential basis for any type of component or machine condition monitoring. In addition, the solution enables efficient data exchange. As such, it is an important prerequisite for the use of assistance systems and constitutes the key to both digitalisation and machine autonomy.

Networking in the digital world of Liebherr

The Connectivity solution is already integrated in various Liebherr machines but can also be retrofitted in earlier generations of machine already on the market. It enables the secure networking of the machine via cloud applications into the digital world – and across nearly all the Group’s product segments, in some cases, it has already been a well-established solution for several years: earthmoving machines, deep foundation machines, material handling technology, mining, tower cranes, mobile and crawler cranes, maritime cranes and components.

In order to support customers and partners throughout the entire life cycle of an application, the Group offers the assurance to utilise all the benefits of modern technology through Liebherr Connect. This, in turn, allows users to optimise their work processes. Liebherr Connect thereby connects Liebherr machines via a state-of-the-art connectivity solution with numerous products and applications provided in the MyLiebherr customer portal or in the app stores.

About the Liebherr Group – 75 years of moving forward

The Liebherr Group is a family-run technology company with a highly diversified product programme. The company is one of the largest construction equipment manufacturers in the world. It also provides high-quality, user-oriented products and services in a wide range of other areas. The Liebherr Group includes over 150 companies across all continents. In 2023, it employed more than 50,000 staff and achieved combined revenues of over 14 billion euros. Liebherr was founded by Hans Liebherr in 1949 in the southern German town of Kirchdorf an der Iller. Since then, the employees have been pursuing the goal of achieving continuous technological innovation, and bringing industry-leading solutions to its customers. Under the slogan ‘75 years of moving forward’, the Group celebrates its 75th anniversary in 2024.
