Liebherr exhibits the THP 80-LP truck mounted concrete city pump

Liebherr Concrete Technology exhibits the THP 80-LP truck mounted concrete city pump. It is the newest addition to our product portfolio. It was specifically built for the North American market and designed based on feedback from industry experts. The THP 80-LP is the most compact unit in Liebherr's wide range of truck mounted pumps. Powerful, versatile and compact, this latest model added to the Liebherr line up is on display at World of Concrete 2024.

Newport News, VA (USA), January 23, 2024 – The [THP 80-LP truck mounted concrete city pump](#) is a compact and powerful pump designed specifically for the North American market. It is the most compact pump in the truck mounted concrete pump product line. It maintains the same high performance, quality, and offers many of the same features as the larger truck mounted concrete pumps. It is the perfect solution for jobs in urban environments, residential jobs and compact job sites where space is limited.

Liebherr's city pump fulfils an industry need for a reliable and flexible boomless pump truck for line pumping applications. The design and development of the THP80-LP city pump is a result of customer feedback and Liebherr's many years of engineering and production. It maintains many of the same features as the larger heavy weight truck mounted boom pumps, such as a 600-liter large capacity hopper.

Compact construction, lower weight

The THP 80-LP offers greater flexibility and mobility for operators to move around the job site. The total length of the new Liebherr city pump is around 28.4 ft. It is quick to set up and easy to control with an HBC option for the remote control. The truck features ample storage with easy access to delivery pipe and hose on the deck and plastic water tanks for saving weight.

The THP 80-LP is mounted on a two axle truck chassis and weighs around 22,684 lbs. which is significantly lighter than the truck mounted boom pumps. This is convenient for customers because it does not require a CDL to operate, which means there is more flexibility and allows more of their staff to operate the equipment.

High Performance

The pumping kit features an open loop hydraulic circuit that is the simple, reliable and powerful. This system is in line with the same quality and performance the boom pump models offer, it provides top performance with very low maintenance costs. Liebherr pump kits are robust, low stroking, low wear and easy to switch parts. The Liebherr city pump is designed to deliver high pumping performance. The suction inlet has a greater diameter than the cylinder itself, ensuring outstanding cylinder loading and discharge, even on extreme concrete types. With the split wear plates maintenance can be done quickly and easily. In addition, Liebherr offers a pumping kit option that allows high pressure application for extreme tasks. Operators can easily switch the hydraulic hoses on the pumping kit, allowing the machine

to provide higher pressure on the concrete. This pump produces concrete pressure in rod side configuration of 1088 psi (75bar), when switching connection, the concrete pressure at piston side is 1813 psi (125bar).

Concrete Technology Solutions

The Liebherr Concrete Technology division provides a diverse range of concrete technology solutions, including the development and manufacturing of high-quality truck mixers, mixing plants and concrete pumps. The range is complimented by additional concrete products, including conveyor belts for truck mixers and plant control systems. Together these products are designed for cost-effective, trouble-free mixing, transportation and installation of concrete.

About Liebherr USA, Co.

[Liebherr USA, Co.](#) based in Newport News, VA provides sales and service on behalf of ten different Liebherr product segments: earthmoving, material handling, mining, mobile and crawler cranes, tower cranes, concrete technology, deep foundation machines, maritime cranes; components, and refrigeration and freezing.

About the Liebherr Group

The [Liebherr Group](#) is a family-run technology company with a highly diversified product portfolio. The company is one of the largest construction equipment manufacturers in the world. It also provides high-quality and user-oriented products and services in a wide range of other areas. The Liebherr Group includes over 140 companies across all continents. In 2021, it employed more than 49,000 staff and achieved combined revenues of over 11.6 billion euros. Liebherr was founded in Kirchdorf an der Iller in Southern Germany in 1949. Since then, the employees have been pursuing the goal of achieving continuous technological innovation, and bringing industry-leading solutions to its customers.
