

Press release

# Liebherr 38 XXT truck-mounted concrete pump: Providing versatility for modern construction sites

---

**With the 38 XXT, Liebherr is presenting a truck-mounted concrete pump at Conexpo that showcases sophisticated technology and a time-tested configuration. The machine meets the highest standards of safety, efficiency, and flexibility, offering a powerful solution for the diverse challenges of modern construction sites.**

Las Vegas, NV (USA), March 3, 2026 – The 38 XXT truck-mounted concrete pump is equipped with a four-part Z-fold distribution boom that offers a vertical reach of 121.7 ft (37.1 m) and a horizontal reach of 107.6 ft (32.8 m). With a fold-out height of 28.71 ft (8.75 m), the truck-mounted concrete pump can also be used on tight construction sites without any problems.

## **Proven boom concept**

The balanced distribution of the boom arms gives the 38 XXT a high degree of flexibility in everyday use, while the generous swivel ranges of the joints enable precise working even in difficult space conditions. Depending on customer requirements, the pump can be mounted on a three or four-axle chassis.

## **Flexible XXT support system**

The swiveling XXT support system of the 38 XXT comes into its own on construction sites with limited space. Due to its swiveling capabilities, the front support can still be extended to the front of the operator's cab on the narrow side. This adds the entire working area in front of the operator's cab. Even with narrow supports on both sides, it is possible to work beyond the cab.

The new XXA stability assistance system expands the range of support options and monitors them electronically. The support outriggers can be set to narrow, partial, or full support on both sides. The operator has maximum flexibility even on confined construction sites and can flexibly adapt the support positions to the respective construction site. All permissible working areas are clearly and concisely displayed on the color display of the radio remote control. The XXA stability assistance system thus offers maximum flexibility and provides the operator with the right support for efficiency on the job site.

In addition, digital inclination monitoring keeps an eye on the machine's angle. The two-stage inclination monitoring system even allows for excessive inclinations of up to 5° under restricted operating conditions and alerts the operator and the surrounding area via a radio display and signal lights.

## **Efficient pump drive: Powerbloc and semi-closed oil circuit**

The 38 XXT is equipped with the “Powerbloc” pump drive unit. All hydraulic switching and measuring elements are fully integrated in this unit, eliminating the need for many previously required hydraulic hoses and additional components.

The drive unit is complimented by the highly efficient semi-closed oil circuit (HCC). It supplies all drives with reliable and powerful hydraulic energy while significantly reducing the amount of oil required. Liebherr's proprietary system combines the advantages of open and closed circuits without any of their typical disadvantages. Users report particularly quiet, powerful, and reliable operation.

## **Focus on safety, ergonomics, and durability**

The 38 XXT is equipped with extensive safety features, including guardrails and fall protection. Ergonomically arranged controls and generous storage areas support efficient workflows and increase operating comfort. The strong construction ensures reliable operation for many years and contributes to low operating and maintenance costs. Numerous well-thought-out detail solutions also facilitate daily use under demanding conditions.

An extensive accessories catalog opens up additional options for customizing the 38 XXT truck-mounted concrete pump. These include modern LED lighting concepts for optimal working conditions in the dark, various storage and material boxes, and practical storage compartments for extension hoses. This allows the machine to be precisely adapted to the requirements of various applications.

## **Profit Maker Campaign – for the US market only**

A special feature of the present truck-mounted concrete pump program is the comprehensive four-year warranty that covers all components of the machine. Liebherr's goal is to help our customers maximize their profitability with our truck-mounted concrete pumps. During this period, customers incur no costs for services or spare parts, which creates maximum planning security and confidence. In addition, a structural warranty ensures long-term reliability and durability of the concrete pump, even under the most demanding conditions.

## About Liebherr USA, Co.

Liebherr USA, Co. based in Newport News, VA provides sales and service on behalf of ten different Liebherr product segments: earthmoving, material handling, mining, mobile and crawler cranes, tower cranes, concrete technology, deep foundation machines, maritime cranes; components, and refrigeration and freezing.

## About Liebherr-Mischtechnik GmbH

Liebherr-Mischtechnik GmbH is a global manufacturer and supplier of high-quality concrete mixing plants, concrete pumps and ready-mixed concrete truck mixers. The company is part of the Liebherr Group and is headquartered in Bad Schussenried, Germany.

## About the Liebherr Group

The Liebherr Group is a family-run technology company with a highly diversified product portfolio. The company is one of the largest manufacturers of construction equipment in the world. It also provides high-quality, user-oriented products and services in a wide range of other areas. The Liebherr Group includes over 150 companies across all continents. In 2024, it employed more than 50,000 staff and achieved combined revenues of over 14 billion euros. Liebherr was founded by Hans Liebherr in 1949 in the southern German town of Kirchdorf an der Iller. Since then, the staff have been pursuing the goal of achieving continuous technological innovation, and bringing industry-leading solutions to its customers.
