Smarter

Greener

It's time to make the change

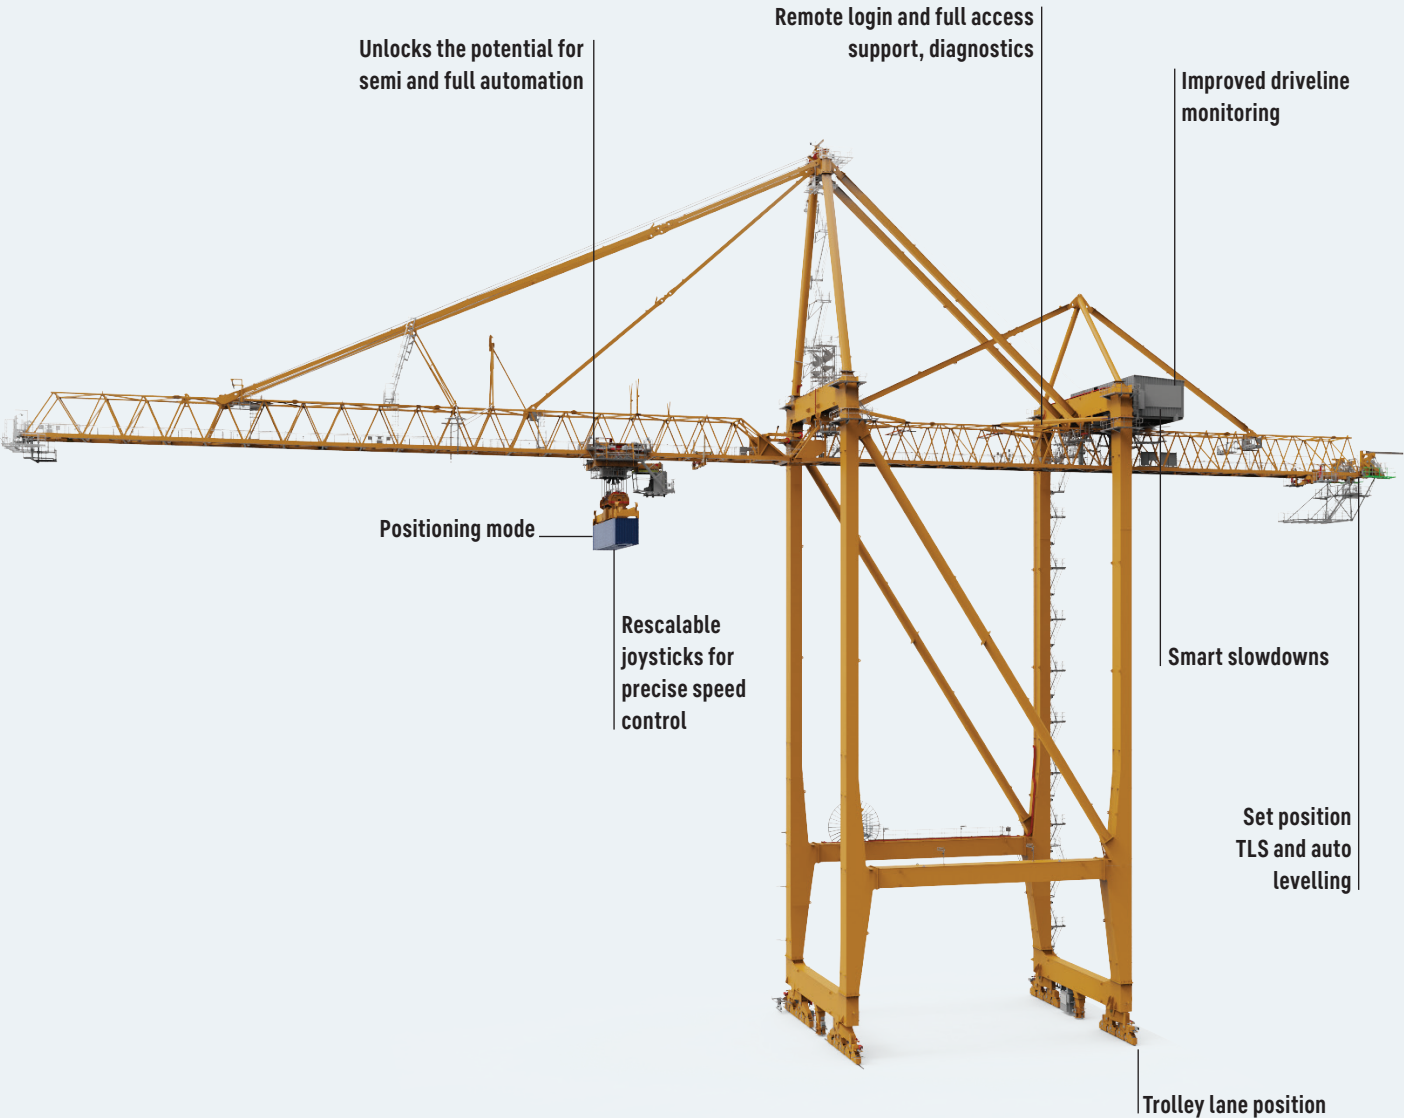

With the ever-increasing challenge to source analogue sub-components and redesign electronic cards we have developed a digital solution. This upgrade replaces your existing Liebherr Thyrovert DC regulation system, including both the analogue electronic cards and thyristor bridge, with one complete device with a digital interface for each crane function.

Available for STS, RTG and RMG with the following analogue systems:

- Thyrovert DC regulation
- Overload protection
- Trim, list, skew control

Additional benefits

Liebherr Transform

Unleash the full potential

Liebherr Transform is the upgrade and modification service from Liebherr Container Cranes Ltd.

Ports and terminals are under increased pressure to reduce costs and boost performance through increased productivity, faster turnarounds and reduction in equipment downtime. This can sometimes result in increased capital expenditure for new equipment.

As a Liebherr Container Cranes customer, you already own the best container handling equipment on the planet. Why not unleash its full potential by upgrading it?

Liebherr Transform uses the best available technologies to make your crane stronger, faster, smarter, greener and ultimately ... better.
