

One partner. One solution.

Complete undercarriage support

LIEBHERR

Mining

Support programs

Remanufacturing, modular maintenance and rebuild programmes help extend the life of the undercarriage throughout the equipment's lifecycle.

Genuine Liebherr components

Engineered and validated to meet Liebherr's strict product specifications for consistent performance, reliability and service life.

Continuous improvement

Field intelligence and operational experience, support ongoing product development so Liebherr's undercarriages continue to perform better.

Site-specific configuration

Undercarriage configurations are matched to site conditions, operating requirements and machine needs.

Local support, global expertise

Factory-trained local teams provide responsive, data-driven support, backed by Liebherr's global engineering network.

Retrofit additions

For machines working in particularly rocky and abrasive conditions, there are specialised retrofit solutions available for additional protection from damage.

Designed to maximise service life, simplify maintenance and support cost predictability

From the right configuration and genuine Liebherr components to field service and support programs, Liebherr makes undercarriage management simpler so customers get the best possible undercarriage performance throughout the life of their machine.

That is the Liebherr difference.
